A List Identity Crisis

You wake up in someone else's body. Your memories, hobbies, favorite foods — all scrambled in a list. Your job is to **reorder, replace, and fix** your identity before it's too late and the changes become *permanent*!

identity = [

"loves biryani",

"name: Shamsa",

"pet rock",

"hobby: traveling and caligraphy",

"plays badminton",

"remembers being a toaster"

Instructions:

Use only list indexing, slicing, and methods — no loops, no if/else, no comprehensions!

- Change your name from "name: Shamsa" to your real name.
- Replace "remembers being a toaster" with "remembers being a Python programmer".
- Remove the lie pet rock.
- Update the food item "loves biryani"
- Replace the hobby "hobby: traveling and caligraphy"," with your actual hobby.
- Append "drinks water like a normal human" to the end.
- Reverse the list.
- Print your new identity list.

BONUS CHALLENGE:

Make a clone of yourself and change their personality into something totally opposite (e.g. replace your hobby, your memory, etc). Then print both versions.
